

Zhijun Guo (Zeek)

Redmond, WA | (425) 435-3138 | shuge@outlook.com

Professional Summary

- **Enterprise analytics engineer and data architect** with extensive experience designing scalable data platforms, modern analytics ecosystems, and business intelligence solutions across marketing, sales, strategy, and operations.
- **Bridges data engineering, business analytics, and AI** to transform complex data into scalable, intuitive solutions that enable data-driven executive decision-making.

Core Skills

- **AI & Automation:** Data Agents | GitHub Copilot & MCP integration | Prompt Engineering | Workflow Orchestration | Semantic Retrieval & RAG
- **Data & Architecture:** Microsoft Fabric | Power BI | Azure | SQL | Python | DAX | Data Engineering | Data Architecture | Semantic Modeling
- **Advanced Analytics:** Statistical Inference | Predictive Modeling | Forecasting | Experimentation | KPI Engineering
- **Business & Leadership:** Marketing & Revenue Intelligence | Executive Decision Support | Analytics Governance | AI Adoption | Enterprise Modernization

Professional Experience

Microsoft | Redmond, WA | 2015 - 2026

Senior Analytics Engineer & AI Architect | Mar 2022 – Jul 2026

- **Enterprise Analytics Modernization:** Architected a modern analytics ecosystem integrating Microsoft Fabric, PySpark, Azure AI, ADF, Power BI, Power Apps, and web applications into a unified platform, improving scalability, governance, automation, AI readiness, and analytics delivery efficiency.
- **AI-Driven Insights & Forecasting:** Architected and developed agentic analytics solutions that combine aggregated business data, domain expertise, and MCP-enabled tools to answer dynamic, chat-based business questions. Integrated these capabilities into business intelligence reporting and downstream APIs, extending AI capabilities across the analytics ecosystem.
- **Executive Decision Support:** Developed executive KPIs and performance analytics to track campaign outcomes; and established target goals using historical performance, campaign similarity, and statistical insights.

Business Analytics Engineer / Data Scientist | Mar 2019 - Mar 2022

- Developed Python-based statistical analysis framework incorporating hypothesis testing, correlation analysis, and magnitude/lift analysis, enabling deeper analysis beyond KPI tracking and helping the team develop more insightful, data-driven stories.
- Engineered standardized marketing performance datasets at multiple levels of granularity, integrating campaign, account, and engagement metrics to enable deeper field-level analysis and more actionable marketing insights.
- Developed tree-based machine learning models to predict account lifetime value, churn rate, segment-level ROI, and year-end engagement, enabling more proactive marketing planning and performance management.

Data Engineer | May 2015 - Mar 2019

- Designed and developed end-to-end data solutions for the marketing organization, spanning data pipelines, analytical data models, and Power BI reporting.
- Built a scalable big-data analytics platform adopted across the marketing organization, enabling downstream teams to analyze user behavior, uncover campaign patterns, and generate actionable insights.
- Modeled and normalized data into analytical data marts and self-service reports, improving consistency and accelerating data-driven decision-making across marketing teams.

Centific Tech | Redmond, WA | 2014 - 2015

Data Engineer / Business Intelligence Engineer | 2014-2015

- Built ETL/ELT pipelines integrating marketing and sales pipeline data from multiple sources into centralized SQL databases.
- Developed SQL-based data transformations and data quality checks to improve data consistency and reliability.
- Managed multiple cross-functional projects using Agile methodologies, improving project coordination, delivery efficiency, and stakeholder alignment.

Education

- University of Science and Technology Beijing - M.E.
- Tianjin University of Technology - B.E.

Professional Development

- Storytelling with data
- Python for data analysis
- Data science for business
- Microsoft Azure: Data Governance, Scalable Architecture & Data Solutions
- Modern Data Stack & Big Data Processing: SQL, Databricks, PySpark, Lakehouse, dbt.
